

A single, secure platform connecting you directly to your assets.

The intelligent tracking platform that automates and optimises daily tasks and services.

ktrack provides immediate visibility and traceability of business assets, automating insight and releasing search time for busy teams.

Real-time location awareness and status validation.

Unburden your teams by providing automated insight and instant visibility.

Transform manual processes and reduce risk whilst driving efficiency, ensuring compliance, and improving safety.

Optimise your workflows and reduce operational overheads.

kinsetsu.co.uk

What it tracks:

ktrack is an IoT platform that provides seamless and automated data insight about your most critical assets, enabling you to make informed decisions.

Healthcare

Instant location insight for beds, medical devices, oxygen cylinders, pumps and patient journeys in healthcare.

Environment

Air quality, temperature and other environmental insights to support safer location management.

Manufacturing

Tools, inventory, componentry and product tracking for better inventory management and improved decision making.

Pupil and Patient Journeys

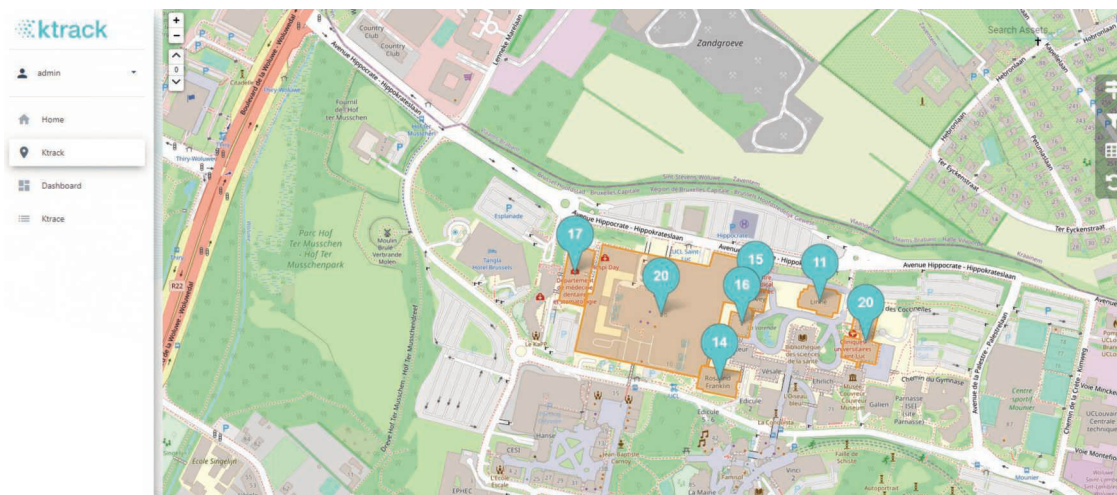

Real-time views for pupil and patient journeys with fleet and operational insights to improve safety, utilisation and communication.

Data

Instant and actionable data to inform decision making, maximise efficiencies and unburden teams.

 **kinsetsu**[®]
hello now.

ktrack ensures teams have the assets needed to deliver against assigned tasks or services.

Digital mapping of your building or geo-location provides instant visual representation of critical asset locations

Count and filter specific assets within key zones

Global search functionality for a specific asset or group of assets

Mobile kscan application for asset detection by staff in unmonitored locations

Real-time data management for remote planning and compliance

Multi-location and application approach including in-building, regional and global location visibility

Full audit and traceability of asset movement and predictive placement across asset lifecycle

Powerful dashboard reporting incorporates customer-specific KPIs

Optional predictive notifications to alert to risks and/or asset constraint

Business logic for alerting and notifications

Workflow automated requests

API library for interoperability with other platforms for future scalability and to ensure no siloed data

Belfast
