

At Kinsetsu, we use sensors and our software to locate, monitor and alert on your medical assets, so your people don't have to.

Our solutions are currently being used by your NHS colleagues to optimise resources (human and financial), and provide unprecedented levels of insight into medical asset location and service status.

Our platform gives time back to frontline workers to allow them to maximise the time they spend delivering optimal patient outcomes.

- Map View (all assets, vehicles and patient flow with custom visualised zones).
- Automated insight to equipment status and location.
- Powerful reporting and dashboards for data driven decision making.
- Association of equipment within wards and stations; highlighting optimal placement.
- Alerting for assets requiring scheduled maintenance.
