

Tariff Schedule

a Guideline for January 1st 2012

Audited Turnover	Enrolment Fee	Annual Fee
> 1 billion €	€ 4,200	€ 10,500
< 1 billion €	€ 3,200	€ 8,000
< 750m €	€ 2,700	€ 6,800
< 500m €	€ 2,200	€ 5,600
< 250m €	€ 2,100	€ 4,800
< 100m €	€ 1,750	€ 4,000
< 75m €	€ 1,650	€ 3,750
< 50m €	€ 1,500	€ 3,500
< 25m €	€ 1,350	€ 3,200
< 10m €	€ 900	€ 2,000
< 5m €	€ 800	€ 1,800
< 3m €	€ 600	€ 1,400
< 1m €	€ 500	€ 990
< 750,000 €	€ 400	€ 750
< 300,000 €	€ 200	€ 500
< 150,000 €	€ 100	€ 250

Please note that GS1 Ireland are subsidising this service until December 31st 2011

Trading partners across the globe have multiple databases filled with information about the products they make, sell, or buy. To enable efficient trading practices, this data needs to be accurate, secure and shared in a streamlined manner. Without this, difficulties occur when a company needs to change, update or add information in its database; suddenly the "catalogue" that trading partners have isn't up-to-date anymore.

That's where DataSync.ie can help.

DataSync.ie is the National Datapool service for distributors, wholesalers and product data users active in the Irish marketplace.

DataSync.ie addresses the issues of product information management by providing a secure data warehouse where data is validated, exchanged and classified in a streamlined manner. The service ensures that local and international trading partners always have the same information in their systems and any changes made to a supplier's database will be automatically sent to all other trading partners.

DataSync.ie is one of 80 national datapools that are part of a global network, the GS1 Global Data Synchronisation Network (GDSN), a powerful repository for secure and continuous synchronisation of accurate data.

- DataSync.ie**
- Creates a single repository for all product information
 - Streamlines listing of products
 - Eliminates duplication of effort
 - Is FREE to use until 2012

Joining GS1 Ireland's DataSync.ie is easy. Simply complete and return this application form and you will be issued with your corporate administrator username and password. Full training will be available to all Users following your subscription.

If you have any questions about DataSync.ie or this application form please contact our helpdesk on +353 1 2080660 or email datasync.ie@gs1ie.org.

DataSync.ie = Increased Efficiency = Increased Productivity = Increased Profits

Why synchronise data?

When a supplier and a customer know they are looking at the same accurate and up-to-date data, it is smoother, quicker and less expensive for them to do business together. Synchronising accurate, properly classified data also results in:

- Improved accuracy of orders
- Fewer forms to fill out
- Fewer duplicate systems and processes
- Most importantly, it provides a **proven way to drive unnecessary costs out of the supply chain.**

Before data about a trade item even enters DataSync.ie, it must first be validated and properly classified. Synchronising incorrect or

improperly classified data creates problems, delays and costs in the supply chain. Imagine the havoc that would result across the entire procurement and logistics process if a product's height is indicated in the "width" section or if it's listed as being 20mm tall when it's actually 20cm tall.

GS1 standards help to prevent these sorts of problems.

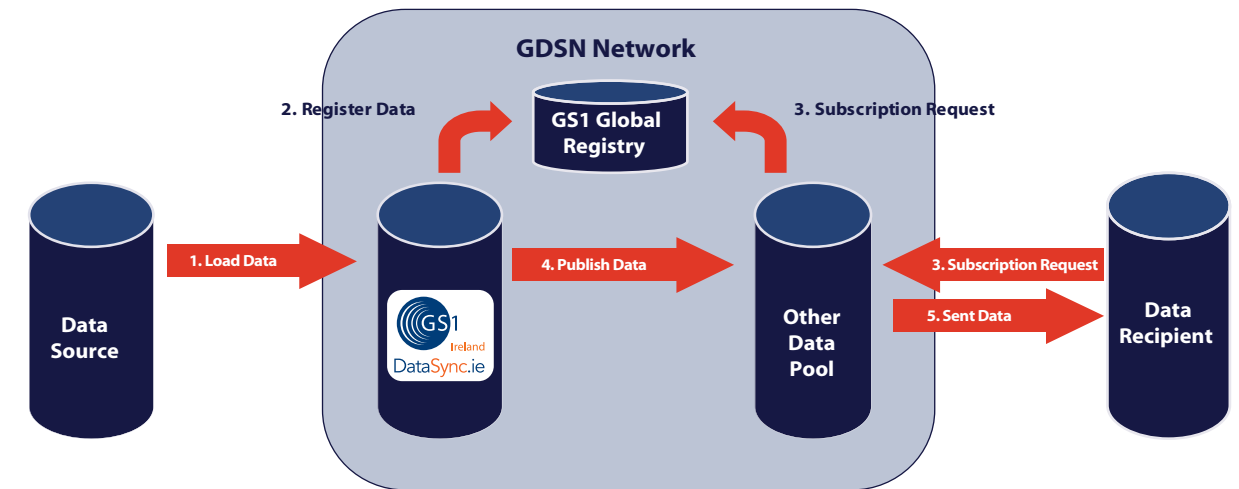

Retailers' issues with sharing information manually

- What does the supplier's fax say?
- Why is some of the required product information missing?
- Why does it take so much time to get the correct product information from a supplier?
- Why is the information held on a product incorrect and out-of-date?
- Why don't products fit in the designated shelf space?
- Why aren't all products identified correctly and why won't they scan at the checkout?

Suppliers' issues with sharing information manually

- What product information is required for each retailer?
- Why do we have different new line listing forms from each retailer?
- Where is all the relevant information for a new product stored within the business?
- How can the required information for a new product be delivered to every retailer – accurately and on time?
- How much time and effort is involved in managing data in multiple places for a variety of customers in multiple formats?

Data Synchronisation between two trading partners in different GS1 DataPools

How it works

Data synchronisation between two trading partners

1. Data is uploaded to DataSync.ie from a data source who may be a manufacturer, supplier or a wholesaler.

2. The data is registered on the global registry (GDSN index).

DataSync.ie validates their data and then the supplier publishes it making the data available within the DataSync.ie datapool.

3. The data recipient, who may typically be a retailer,

wholesaler, healthcare provider or any other buyer, requests a subscription to the published data in DataSync.ie.

4. DataSync.ie publishes the requested data to the recipients selected datapool.

5. Recipient receives the requested data.

What DataSync.ie offers your business

Data Synchronisation

- Allows buyers and trading partners to electronically synchronise data about:
 - New products
 - Product and price changes
 - Product deletions

- Includes information on:

- Fixed-weight items
- Variable-measure (random-weight) items
- House brands and private label items
- Healthcare products

Data Integrity

- Ensures completeness and conformity of data with respect to:
 - GS1 numbering standards
 - Global standards for units of measure, packaging product

classification, space management etc.

- Industry-specific business rules
- Specific trading partner requirements

Central Data Repository (DataSync.ie Registry)

- Provides buyers, sellers, trading partners and other industry stakeholders with an inexpensive means of accessing information on the total market:
 - Publicly available, neutral item data (NOT price data)
 - Digital images and product dimensions
 - Extensive search facilities
 - Data and images online or downloadable
