

GS1 Logistics Label Tool

An online service from GS1 Ireland

The GS1 Logistics Label Tool has been developed specifically for small and medium businesses to quickly and easily create logistic labels for pallets.

The Logistics Label Tool is accessible via the GS1 Ireland website and no additional software or systems are required. Once generated your labels can be printed on a standard office printer.

The GS1 Logistics Label and SSCC

More and more companies require their trading partners to include a GS1 Logistics Label on transport units. A GS1 Logistics Label can include a variety of information about the unit in both human readable and barcode format. The one mandatory element of a GS1 Logistics Label is to include a **Serial Shipping Container Code (SSCC)**. A SSCC is used to uniquely identify goods as they move through the supply chain and facilitates quicker goods inwards procedures. GS1 Logistics Labels can be created for a) standardised, b) variable weight or c) mixed item trade units.

A simple and easy to use online tool for businesses that need to create logistics labels with Serial Shipping Container Codes (SSCC)

Free Text	<p>GS1 Ireland 2nd Floor The Merrion Centre Nuttley Lane Dublin 4 Pallet of GS1 breakfast cereal</p>
Human Readable	<p>SSCC: 353912345678910439 CONTENT (GTIN of the trade item): 05391234567892 COUNT (Quantity of trade items): 40 BEST BEFORE, dd.mm.yyyy (Best before date): 14.12.2017 BATCH/LOT: ABC123</p>

Benefits of using the GS1 Logistics Label Tool

- **Create accurate labels quickly and efficiently** – the GS1 Logistics Label Tool allows you to create your own PDF format labels without having to buy additional software or hardware.
- **Identify products as they move through the supply chain** - creating labels with barcodes to identify your products will save you and your trading partners time and money.
- **Access this tool anywhere and anytime** - as this tool does not depend on internal or third party software, and is accessed through a browser, it simply requires internet access to be used from any location.
- **Print labels on a standard office printer** - labels can be printed on your standard home or office printer.
- **Keep a record of all your GS1 Logistics Labels** – the tool automatically archives all of the labels created for future reference, or reprinting if necessary.
- **Label customisation** – it is also possible to insert your logo on transport labels.

GS1 Application Identifiers (AIs) options available on the GS1 Logistics Label Tool

- SSCC: AI (00)
- GTIN of the trade unit: AI (02) or (01)
- Quantity of trading units for AI (02) and AI (37)
- Net weight for variable items: AI (3102)
- Date specification (optional): AI (11) or AI (13) - (17)
- Batch or lot number (optional): AI (10)

For further information on the specifications of GS1 Logistics Labels, Serial Shipping Container Codes (SSCC), the GS1-128 barcode symbology and Application Identifiers (AIs), please consult our GS1-128 Guideline booklet which is available to download from our website at www.gs1ie.org/standards/logistics-label
